

USB DUST COVER DUST COVER

DUST COVER FOR USB CHARGERS

Our standard USB range can now be protected with the use of our USB dust covers. This will protect the external USB sockets from water and dust. These covers can easily be added or removed from the USB charger whilst the USB charger is already installed. Due to this being the case, it is recommended that these covers are not installed on units that are in direct contact with the general public. Suitable for single or dual standard USB chargers and not suitable for Front Fit version units outside of Ø36.6mm. The USB dust cover is made from flame retardant rubber material.

USB dust cover closed and open

USB dust cover fits both double and single socket
