Broadband high-gain directional antenna, 380-470 MHz

## Extended network range and reliable high performance

The mast-mounted ACY7 directional antenna is designed for enhanced broadband high-gain RF radiation in the frequency range 380-470 MHz, with an antenna gain of 10 dBi. It meets rigorous criteria for high performance and extended operating range in fixed wireless networks where outdoor antennas are required because of insufficient radio propagation.

Long service life is ensured by high-quality materials and a moulded watertight balun.

The Carant ACY series of outdoor mast-mounted antennas has been developed specifically for fixed wireless networks. ACY antennas have demonstrated outstanding performance and reliability worldwide, in commercial networks from leading international suppliers of telecommunications equipment.

Carant antennas support all major standards used in fixed wireless networks.

### Benefits

- High gain for greater network operating range
