

> Tour Guide System 12er Kit

Die modulare Personenführungsanlage, die keine Wünsche offen lässt.

City trips, museums, bus tours, cruises or factory tours . . .

the information comes in a crisp, clear sound. Combine your individual communication system for your travel groups. Our tour guide system was developed together with and for the special requirements of tour operators.

The guest receiver (ATR100) is the smallest and most light-weight device in the market. With a thin lanyard it can be comfortably worn around the neck. The operating time is more than 10h.

The hygienic headset (THS01) is wipeable and also very comfortable to wear.

The transmitter (ATT100) is very small and resistant. 10 + 10 pre-programmed channels cover a range of up to 2km. When sending with low power the battery lasts the entire day.

With the guide headset (GHS01) it is even possible to play recorded texts or music from an external MP3 player.
